# **SLIDE-IN ELECTRIC RANGE**

## **USER MANUAL**

**IMPORTANT: READ AND SAVE THESE INSTRUCTIONS.** 

FOR RESIDENTIAL USE ONLY.

INSTALLER: PLEASE LEAVE THESE INSTRUCTIONS WITH THIS UNIT FOR

THE OWNER.

**OWNER: PLEASE RETAIN THESE INSTRUCTIONS FOR FUTURE** 

REFERENCE.

## THANK YOU FOR YOUR PURCHASE

Thank you for your purchase. We know that you have many brands and products to choose from and we are honored to know that you have decided to take one of our products into your home and hope that you enjoy it.

COSMO Appliances are designed according to the strictest safety and performance standard for the North American market. We follow the most advanced manufacturing philosophy. Each appliance leaves the factory after thorough quality inspection and testing. Our distributors and our service partners are ready to answer any questions you may have regarding how to install, use and care for your products. We hope that this manual will help you learn to use the product in the safest and most effective manner.

<u>Before using this product, please read through this manual carefully.</u> Keep this user manual in a safe place for future reference. Please ensure that other persons using this product are familiar with these instructions as well.

If you have any questions or concerns, please contact the dealer from whom you purchased the product, or contact our Customer Support at:

## **RANGE SAFETY**

## **Read All Instructions Before Using the Appliance**

Your safety and the safety of others are very important.

We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

This is the safety alert symbol.

This symbol alerts you to potential hazards that can kill or hurt you and others.

All safety messages will follow the safety alert symbol and either the word "WARNING" or "CAUTION." These words mean:

You can be killed or seriously injured if you don't follow instructions.

A potentially hazardous situation which, if not avoided, could result in minor or moderate injury.

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

## California Proposition 65 Warning

**⚠ WARNING:** Cancer and Reproductive Harm - www.P65Warnings.ca.gov.

## **WARNING**

- This appliance is intended for normal residential use. It is not approved for commercial use, outdoor installation, or any other application not specifically allowed by this manual.
- This appliance requires connection to a 3-prong or 4-prong, 240VAC single-phase (split-phase), 60Hz grounded electrical source dedicated to the appliance. When installed, appliance must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, NFPA 70 or the Canadian Electric Code, CSA C22.1-02.
- Proper installation is the responsibility of the installer. Any adjustment
  and service should be performed only by qualified oven installers or
  service technicians. The manufacturer is not responsible for any injury or
  damage that may result from incorrect or defective installation by
  unauthorized personnel.
- Product failure due to improper installation is not covered under warranty.
- Do not use a steam cleaner to clean the appliance.
- This appliance is not intended to be operated with separate remote control system.

## **ANTI-TIP DEVICE**

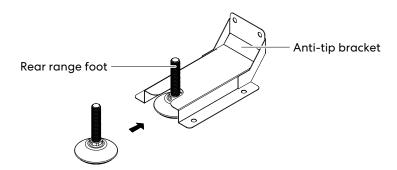

#### **Tip Over Hazard**

- A child or adult can tip the range and be killed.
- Install anti-tip bracket to floor or wall per installation instructions.
- Slide range back so rear range foot is engaged in the slot of the anti-tip bracket.
- Re-engage anti-tip bracket if range is moved.
- Do not operate range without anti-tip bracket installed and engaged.
- Failure to follow these instructions can result in death or serious burns to children and adults.

#### Making sure the anti-tip bracket is installed:

- Slide range forward.
- · Look for the anti-tip bracket securely attached to floor or wall.
- Slide range back and make sure rear range foot is under anti-tip bracket.

**WARNING:** To reduce the risk of fire, electrical shock, injury to persons, or damage when using the range, follow basic precautions, including the following:

- WARNING: TO REDUCE THE RISK OF TIPPING OF THE RANGE, THE RANGE MUST BE SECURED BY PROPERLY INSTALLED ANTI-TIP DEVICES. TO CHECK IF THE DEVICES ARE INSTALLED PROPERLY, SLIDE RANGE COMPLETELY FORWARD, LOOK FOR ANTI-TIP BRACKET SECURELY ATTACHED TO THE FLOOR OR WALL, AND SLIDE RANGE BACK SO THE REAR RANGE FOOT IS UNDER ANTI-TIP BRACKET.
- CAUTION: Do not store items of interest to children in cabinets above a
  range or on the back guard of a range children climbing on the range
  to reach items could be seriously injured.
- Do Not Leave Children Alone Children should not be left alone or unattended in area where range is in use. They should never be allowed to sit or stand on any part of the appliance.
- · Never use your appliance for warming or heating the room.
- Use this appliance only for its intended purpose as described in this manual.
- Proper Installation The appliance, when installed, must be electrically grounded in accordance with local codes, or in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 or the Canadian Electrical Code, CSA C22.1-02. In Canada, the appliance must be electrically grounded in accordance with Canadian Electrical Code. Be sure your appliance is properly installed and grounded by a qualified technician.
- User Servicing Do not repair or replace any part of the range unless specifically recommended in the manual. All other servicing should be referred to a qualified technician.
- Before performing any service, unplug the range or disconnect the power supply at the household distribution panel by removing the fuse or switching off the circuit breaker.
- Do Not Use Water on Grease Fires Smother fire or flame or use dry chemical or foam-type extinguisher.

- If there is a fire in the oven during baking, smother the fire by closing the oven door and turning the oven off or by using a multi-purpose dry chemical or foam-type fire extinguisher.
- Do not use any type of foil or liner to cover the oven bottom or anywhere in the oven, except as described in this manual. Oven liners can trap heat or melt, resulting in damage to the product and risk of shock, smoke or fire.
- Use Only Dry Potholders Moist or damp potholders on hot surfaces may result in burns from steam. Do not let potholder touch hot heating elements. Do not use a towel or other bulky cloth.
- DO NOT TOUCH SURFACE UNITS OR AREAS NEAR UNITS Surface units
  may be hot even though they are dark in color. Areas near surface units
  may become hot enough to cause burns. During and after use, do not
  touch, or let clothing or other flammable materials contact surface units
  or areas near units until they have had sufficient time to cool. Among
  these areas are the coil elements, the cooktop, and surfaces facing the
  cooktop.
- DO NOT TOUCH HEATING ELEMENTS OR INTERIOR SURFACES OF OVEN

   Heating elements may be hot even though they are dark in color.
   Interior surfaces of an oven become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials contact heating elements or interior surfaces of oven until they have had sufficient time to cool. Other surfaces of the appliance may become hot enough to cause burns among these surfaces are oven vent openings and surfaces near these openings, oven doors, and windows of oven doors.
- Do Not Cook on Broken Cooktop If cooktop should break, cleaning solutions and spillovers may penetrate the broken cooktop and create a risk of electric shock. Contact a qualified technician immediately.
- Avoid scratching or impacting glass doors, cooktops, or control panels.
   The cooktop can be scratched with items such as knives, sharp instruments, rings or other jewelry, and rivets on clothing. Doing so may lead to glass breakage.
- Never Leave Surface Units Unattended at High Heat Settings Boilover causes smoking and greasy spillovers that may ignite.

- Do Not Heat Unopened Food Containers Build-up of pressure may cause container to burst and result in injury.
- Wear Proper Apparel Loose-fitting or hanging garments should never be worn while using the appliance.
- Use Proper Pan Size This appliance is equipped with one or more surface units of different size. Select utensils having flat bottoms large enough to cover the surface unit heating element. The use of undersized utensils will expose a portion of the heating element to direct contact and may result in ignition of clothing. Proper relationship of utensil to heating element will also improve efficiency.
- Glazed Cooking Utensils Only certain types of glass, glass/ceramic, ceramic, earthenware, or other glazed utensils are suitable for rangetop service without breaking due to the sudden change in temperature.
- Utensil Handles Should Be Turned Inward and Not Extend Over Adjacent Surface Units – To reduce the risk of burns, ignition of flammable materials, and spillage due to unintentional contact with the utensil, the handle of a utensil should be positioned so that it is turned inward, and does not extend over adjacent surface units.
- If power is lost to an electric cooktop with knob surface unit controls
  while a surface unit is ON, the surface unit will turn back on as soon as
  power is restored. In the event of power loss, failure to turn all surface
  unit knobs to the OFF position may result in ignition of items on or near
  the cooktop, leading to serious injury or death.
- Do not place or store items that can melt or catch fire on the glass cooktop, even when it is not being used. If the cooktop is inadvertently turned on, they may ignite. Heat from the cooktop or oven vent after it is turned off may cause them to ignite also.
- Use Care When Opening Door Let hot air or steam escape before removing or replacing food.
- Never broil with door open. Open-door broiling is not permitted due to overheating of control knobs.
- Care must be taken to prevent aluminum foil and meat probes from contacting heating elements.

- Placement of Oven Racks Always place oven racks in desired location while oven is cool. If rack must be moved while oven is hot, do not let potholder contact hot heating element in oven.
- Injuries may result from misuse of appliance doors or drawers such as stepping, leaning, or sitting on the doors or drawers.
- Storage in or on Appliance Flammable materials should not be stored in an oven or near surface units.
- · This appliance is not intended for storage.
- Maintenance Keep range area clear and free from combustible materials, gasoline, and other flammable vapors and liquids.
- Do not let cooking grease or other flammable materials accumulate in or near the range. Grease in the oven or on the cooktop may ignite.
- Keep Oven Vent Ducts Unobstructed.
- Clean Cooktop With Caution If a wet sponge or cloth is used to wipe spills on a hot cooking area, be careful to avoid steam burn. Some cleaners can produce noxious fumes if applied to a hot surface.
- Use care when touching the cooktop. The glass surface of the cooktop will retain heat after the controls have been turned off.
- Do Not Soak Removable Heating Elements Heating elements should never be immersed in water.
- Do Not Clean Door Gasket The door gasket is essential for a good seal. Care should be taken not to rub, damage, or move the gasket.
- Do Not Use Oven Cleaners No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the oven.
- Clean Only Parts Listed in Manual.
- Do not use replacement parts that have not been recommended by the manufacturer (e.g. parts made at home using a 3D printer).
- Proper Disposal of Your Appliance Dispose of or recycle your appliance in accordance with Federal and Local Regulations. Contact your local authorities for the environmentally safe disposal or recycling of your appliance.

### For units with ventilating hood

- Clean Ventilating Hoods Frequently Grease should not be allowed to accumulate on hood or filter.
- When flaming foods under the vent hood, turn the fan on.

### For self-cleaning ranges

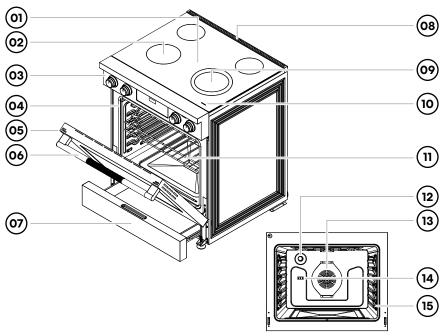

- Before Self-Cleaning the Oven Remove broiler pan and other utensils. Wipe off all excessive spillage before initiating the cleaning cycle.
- Wait for the oven to cool before removing contents and cleaning the oven.
- In the event of ignition inside the oven during self-clean, turn off the
  oven and wait for the fire to extinguish. DO NOT FORCE THE DOOR
  OPEN. Introduction of fresh air at Self Clean temperatures may lead to
  a burst of flame from the oven.
- If the self-cleaning mode malfunctions, keep door closed, turn off the appliance, disconnect the circuit at the circuit breaker box, and contact a qualified service provider for repairs.
- Some birds are extremely sensitive to the fumes produced during a selfclean cycle. Move birds to another well-ventilated room.

## **OVERVIEW**

## **RANGE LAYOUT**

The range you have purchased may have some or all of the items listed. The locations and appearances of the features shown here may not match those of your model.

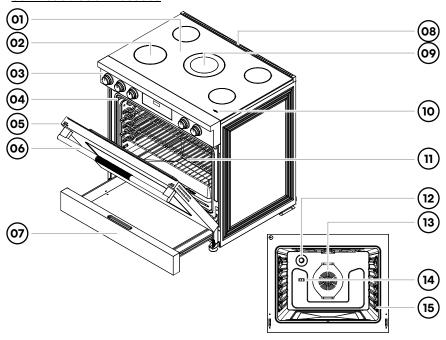

## 30" Model: COS-RES304SS

- **01.** Glass-ceramic cooktop
- **02.** Surface heating element (single)
- 03. Control panel
- **04.** Door gasket
- 05. Oven door
- 06. Oven door handle
- **07.** Storage drawer

- 08. Oven vent
- 09. Surface heating element (dual)
- 10. Hot surface indicator
- 11. Oven rack
- 12. Oven light
- 13. Convection fan
- 14. Temperature sensor
- 15. Rack position

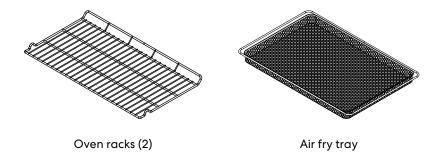

### 36" Model: COS-RES365SS

- **01.** Glass-eeramic cooktop
- **02.** Surface heating element (single) **09.** Surface heating element (dual)
- **03.** Control panel
- **04.** Door gasket
- 05. Oven door
- 06. Oven door handle
- 07. Storage drawer

- 08. Oven vent
- 10. Hot surface indicator
- 11. Oven rack
- 12. Oven light
- 13. Convection fan
- 14. Temperature sensor
- 15. Rack position

## **ACCESSORIES INCLUDED**

### Note:

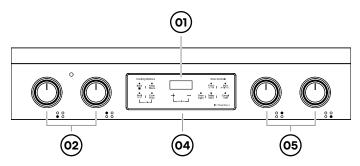

- Reference the contact information at the end of this manual and contact customer service if any accessories are missing.
- To purchase replacement parts or any other accessories, please visit www.cosmoappliances.com or reference the contact information at the end of this manual.
- The images in this guide may be different from the actual components and accessories, which are subject to change by the manufacturer without prior notice for product improvement purposes.

## **OPERATION**

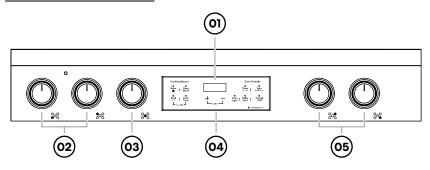

## **CONTROL PANEL**

The appearance of the knobs may vary from what is shown below.

## 30" Model: COS-RES304SS

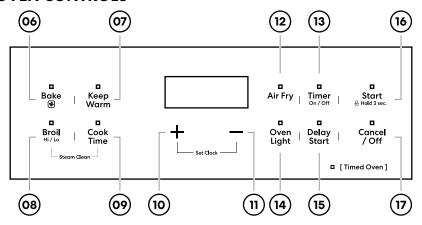

## 36" Model: COS-RES365SS

#	Name	Description
01	Display	To show the time and provide oven status.
02	Cooktop elements	To turn the left elements on and off.
03	Cooktop element	To turn the middle element on and off.
04	Oven/Timer controls	To turn the oven functions or timer on and off.
05	Cooktop elements	To turn the right elements on and off.

## **OVEN CONTROLS**

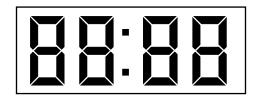

#	Name	Description
06	Bake	To select the Bake or Convection Bake function.
07	Keep Warm	To select the Keep Warm function.
80	Broil	To select the Hi Broil or Lo Broil function.
09	Cook Time	To set the length of the cook time.
10	+	To increase temperature and all times.
11	-	To decrease temperature and all times.
12	Air Fry	To select the Air Fry function.
13	Timer	To set or cancel the timer.
14	Oven Light	To turn the oven light on and off.
15	Delay Start	To set the length of the delay time.
16	Start	To start all functions of the oven.
17	Cancel/Off	To stop oven functions or cancel settings.

## **FEATURES**

### **CLOCK**

The digital clock displays the time of day when the oven is not in use. The control is set to use a 12-hour clock.

## **Setting the Clock**

- Press + and at the same time.
   The current clock flashes in the display.
- 2. Press/hold + or to adjust the clock.
- 3. Press Start to confirm and start the clock.

## **Changing the Hour Mode**

**1.** Press and hold + and - at the same time for 3 seconds to toggle and select 12-hour or 24-hour clock.

The display will show the selected hour mode 12H or 24H for 3 seconds.  $\label{eq:cond}$ 

#### TIMER

The timer serves as an extra timer in the kitchen that beeps when the set time has run out. It does not start or stop cooking. The timer feature can be used during any of the other oven control functions.

## **Setting the Timer (Up to 24 Hours)**

1. Press Timer On/Off once.

"0:00" appears and flashes in the display.

- 2. Press/hold + or to set the length of time.
- 3. Press Timer On/Off to start the timer.

The remaining time countdown appears in the display for a few seconds before the clock returns.

#### Note:

- Timer indicator light above Timer On/Off flashes, indicating a timer is counting down.
- Pressing Timer On/Off will recall the remaining time in the display for a few seconds.
- For remaining time less than a minute, the display shows MM:SS (minutes:seconds); for remaining time over a minute, the display shows HH:MM (hours:minutes).
- **4.** When the set time runs out, "00:00" flashes in the display and the indicator tone sounds for about 20 seconds. Press **Cancel/Off** to cancel the tone early.

## Changing the Timer

1. Press Timer On/Off once.

The remaining time will flash in the display for a few seconds.

2. While the remaining time is flashing, press/hold + or - to set the new length of time.

3. Press Timer On/Off to start the timer.

### **Canceling the Timer**

**1.** Press and hold **Timer On/Off** for 3 seconds or until the timer indicator light turns off.

#### Note:

• Pressing **Cancel/Off** will not cancel the current timer, but will cancel any oven cooking modes in progress.

### **OVEN LIGHT**

The interior oven light automatically turns on and off when the door is opened and closed.

1. Press Oven Light to manually turn the oven light on or off.

## **OVEN CONTROL LOCK**

The Oven Control Lock feature locks most of the oven controls. The Timer, Oven Light, Start, and Cancel/Off are the only usable pads when the lock is activated.

- 1. To activate the oven control lock, press and hold **Start** for 3 seconds.
- 2. To deactivate the oven control lock, press and hold **Start** for 3 seconds.

#### **OVEN SETTINGS**

The oven settings can be accessed while the oven is idle and the display is showing the time of day. The settings remain in the control's memory after a power failure or until changed.

## Available oven settings:

- Adjusting the Oven Thermostat calibrate the oven temperature
- Selecting Fahrenheit or Celsius switch the temperature scale

### **Adjusting the Oven Thermostat**

This oven may cook differently than the one it replaced. Use the oven for a few weeks to become more familiar with it before adjusting the thermostat settings.

Do not use thermometers, such as those found in grocery stores, to check the temperature setting of your oven. These thermometers may vary 20°F – 40°F.

#### Note:

- The thermostat adjustment will affect Bake, Convection Bake, Broil (Hi/Lo), Keep Warm, and Air Fry. This adjustment will not affect Steam Clean.
- The adjustment will be retained in memory after a power failure.
- The oven temperature can be increased (+) or decreased (-) as much as 35°F (19°C).
- Press and hold Bake and Broil at the same time for 3 seconds while the oven is idle.
- 2. Press/hold + or to set the desired temperature adjustment.
  Examples:
  - 15 raises the oven temperature by 15 degrees
  - -15 lowers the oven temperature by 15 degrees
- 3. Press Start to accept the change.

### **Selecting Fahrenheit or Celsius**

The oven is set to display the Fahrenheit temperature scale. Follow these instructions to set the display to either the Celsius or Fahrenheit scales.

 Press and hold Bake for 3 seconds to toggle and select F (Fahrenheit) or C (Celsius).

The display will show the selected temperature scale F or C for 3 seconds.

### **COOK TIME**

Set the oven to cook for a specific length of time and turn off automatically at the end of the cooking time.

#### **Food Poisoning Hazard**

- Do not let food sit in oven more than one hour before or after cooking.
- Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when finished cooking. Consuming spoiled food can result in food poisoning or sickness.

## **Setting a Timed Cook**

For example, to Bake at 375°F for 30 minutes.

- 1. Adjust oven rack levels as needed.
- 2. Press Bake to select Bake mode
- 3. Press/hold + or to set the bake temperature to 375°F.
- 4. Press Cook Time.

#### Note:

- Cook Time can only be used with the Bake, Convection Bake, and Air Fry modes.
- **5.** Press/hold + or to set the cooking time to **0:30**.

#### 6. Press Start.

The oven starts to preheat and PRE appears in the display. Keep the oven door closed, and wait for the oven to preheat to the set temperature.

#### Note:

- The Timed Oven indicator lights up on the control panel, indicating an automatic oven is set.
- When the preheat has completed, the set temperature appears in the display and the indicator tone sounds for a few seconds. The cooking time countdown starts.
- 7. Place the food in the oven.

The oven will continue to cook for the set amount of time and then turn off automatically.

**8.** When the cooking time has elapsed, END shows in the display. The cook end indicator tone sounds until **Cancel/Off** or any pad is pressed. Remove the food from the oven.

## **Changing the Cook Time during Cooking**

For example, to change the cook time to 1 hour during cooking.

- 1. Press Cook Time.
- 2. Press/hold + or to change the cooking time to 1:00.
- 3. Press Start to accept the change.

## **Changing the Temperature during Cooking**

For example, to change the bake temperature to 300°F.

- 1. Press Bake.
- 2. Press/hold + or to change the bake temperature to 300°F.
- 3. Press Start to accept the change.

### **DELAY START**

Set the oven to turn on automatically after a specific length of time. With both Delay Start and Cook Time set, the oven automatically turns on after a specific length of time and turns off after a selected length of cooking time.

## **A** CAUTION

#### **Food Poisoning Hazard**

- Do not let food sit in oven more than one hour before or after cooking.
- Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when finished cooking. Consuming spoiled food can result in food poisoning or sickness.

## **Setting a Delayed Timed Cook**

For example, to Bake at 375°F for 30 minutes and delay the start of baking by 45 minutes.

- 1. Adjust oven rack levels as needed.
- 2. Press Bake to select Bake mode.

- 3. Press/hold + or to set the bake temperature to 375°F.
- 4. Press Cook Time.

#### Note:

- Cook Time can only be used with the Bake, Convection Bake, and Air Fry modes.
- 5. Press/hold + or to set the cooking time to 0:30.
- 6. Press Delay Start.
- 7. Press/hold + or to set the delaying time to 0:45.
- 8. Press Start to confirm.

#### Note:

- The Timed Oven indicator lights up on the control panel, indicating an automatic oven is set.
- When the delaying time has elapsed, the oven automatically turns on and starts to preheat. After preheating, the oven will continue to cook for the set amount of time and then turn off automatically.
- **9.** When the cooking time has elapsed, END shows in the display. The cook end indicator tone sounds until **Cancel/Off** or any pad is pressed. Remove the food from the oven.

## COOKTOP

#### BEFORE USING THE COOKTOP

Read all instructions before using.

## **WARNING**

- Do not cook on a broken cooktop. If the cooktop is broken, cleaning solutions and spillovers may penetrate the broken cooktop and create a risk of electric shock. Contact a qualified technician immediately.
- Do not place or store items that can melt or catch fire on the glass cooktop, even when it is not being used.
- Never leave surface units unattended at high heat settings. Boilovers cause smoking and greasy spills that may catch on fire.
- · Keep flammable items away from the cooktop.
- · Turn off all controls when done cooking.
- Turn cookware handles inward and not extend over adjacent surface units to reduce the risk of burns, ignition of flammable materials, and spillage due to unintentional contact with the cookware.
- Always place the pan in the center of the surface unit you are cooking on. Proper contact of cookware to heating element also will improve efficiency.
- Clean cooktop with caution. If a wet sponge or cloth is used to wipe spills on a hot cooking area, be careful to avoid steam burn. Some cleaners can produce noxious fumes if applied to a hot surface.

# **A** CAUTION

- Never cook directly on the glass. Always use cookware.
- Do not use the glass cooktop surface as a cutting board.
- Do not slide metal or glass across the cooktop surface. Cookware with rough or uneven bottoms can mark or scratch the cooktop surface.
- Do not place sealed containers on the cooktop.
- Do not place aluminum foil or plastic items such as salt and pepper shakers, spoon holders, or plastic wrappings or any other material on the range when it is in use.
- · Do not turn surface units on before placing cookware.
- · Always turn the surface units off before removing cookware.
- The surface element may appear to have cooled after it has been turned off. The element may still be hot and touching the element before it has cooled sufficiently can cause burns.
- Only certain types of glass, glass-ceramic, ceramic, earthenware, or other glazed cookware are suitable for range-top service without breaking due to the sudden change in temperature.
- Choose proper heating element size. For smaller pots and pans, use the smaller heating elements. For larger pots and pans, use the larger heating elements. Select pans that have flat bottoms large enough to cover the heating elements. Using undersized pans exposes a portion of the heating element to direct contact and may result in clothing burning.
- Immediately clean spills on the cooking area to prevent a tough cleaning chore later.
- Do not use a steel-wool pad or scrub pad or abrasive cleaning pads.
   They can scratch the surface.

## **COOKING AREAS**

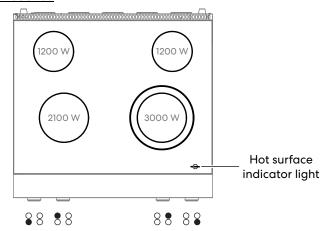

The cooking areas on your range are identified by permanent circles on the glass cooktop surface.

When a control is turned on, a glow can be seen through the glass cooktop surface.

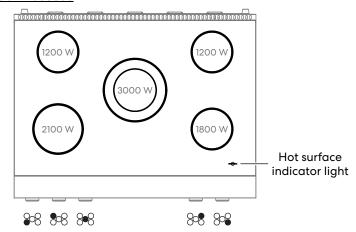

For the most efficient cooking, fit the pan size to the element size. Pans should not extend more than 1/2" to 1" (1.3 cm to 2.5 cm) beyond the cooking area.

### 30" Model: COS-RES304SS

## 36" Model: COS-RES365SS

### HOT SURFACE INDICATOR

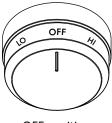

The hot surface indicator light glows and indicates that one or more cooktop elements are still hot. When the hot surface indicator turns off, the glass surface may still feel slightly hot to touch.

### Note:

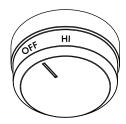

- The hot surface indicator light glows 30 seconds after an element is turned on or when the surface temperature reaches 150°F (65°C).
- The hot surface indicator light remains on after the element is turned off and until the surface has cooled to approximately 150°F (65°C).

### USING THE COOKTOP ELEMENTS

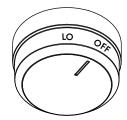

### Turning on a Single Element

OFF position

HI position

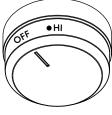

LO position

- 1. Select a single element, and find its control knob.
- **2.** Push the control knob in and turn it in either direction to the desired setting.
- 3. To turn off an element, turn the control knob to the OFF position.

### **Turning on a Dual Element**

OFF position

Single element HI position

Dual element HI position

- 1. Select a dual element, and find its control knob.
- **2.** Push the control knob in and turn it in either direction to use element as a single element or a dual element.
  - Single: Turn the knob counterclockwise.
  - · Dual: Turn the knob clockwise
- **3.** To turn off an element, turn the control knob to the **OFF** position.

#### Note:

• It is normal for the cooktop elements to cycle on and off during cooking, even on higher settings.

## IN CASE OF POWER FAILURE

The electric cooktop and oven cannot be used during a power outage.

If power is lost while a cooktop element is on, the cooktop element will turn back on as soon as power is restored.

In the event of power loss, failure to turn all cooktop element knobs to the OFF position may result in ignition of items on or near the cooktop, leading to serious injury or death.

### USING THE PROPER COOKWARE

The size and type of cookware will influence the settings needed for the best cooking results. Cookware should have flat bottoms that make good contact with the entire surface heating element, and should not extend more than 1/2" to 1" (1.3 cm to 2.5 cm) beyond the cooking area for the most efficient cooking. Using the correct cookware can prevent many problems, such as uneven cooking or extended cooking times.

#### **Cookware Recommendations**

- · Flat bottom and straight sides
- · Heavy-gauge pans
- Pan sizes that match the amount of food to be prepared and the size of the surface element
- · Weight of handle does not tilt pan.
- · Pan is well balanced
- · Tight-fitting lids
- Flat bottom woks

#### Note:

- Do not use woks that have support rings. This type of wok will not heat on glass surface elements.
- Do not use foil or foil-type containers. Foil may melt onto the glass. Do not use the cooktop if metal has melted on it.

### **Choosing Cookware**

The cookware material determines how evenly and quickly heat is transferred from the surface element to the pan bottom.

#### Recommended

- Aluminum Excellent heat conductor. Some types of food will cause it to
  darken (anodized aluminum cookware resists staining and pitting). If
  aluminum pans slide across the ceramic cooktop, they may leave metal
  marks which will resemble scratches. Remove these marks immediately.
  Because of its low melting point, thin weight aluminum should not be
  used.
- Copper Excellent heat conductor but discolors easily. May leave metal
  marks on glass-ceramic (see Aluminum above). Do not let these pots boil
  dry. Overheated metal can bond to glass cooktops. An overheated
  copper bottom pot will leave a residue that will permanently stain the
  cooktop if not removed immediately.
- **Stainless Steel** Slow heat conductor with uneven cooking results. Is durable, easy to clean and resists staining.
- Enamel (painted) on Cast Iron Bottom of pan must be smooth coated and smooth.

#### **Not Recommended**

- **Enamel (painted) on Steel** Heating empty pans can cause permanent damage to cooktop glass. The enamel can melt and bond to the ceramic cooktop.
- Cast Iron A poor heat conductor, slow to absorb heat but retains heat very well. Will scratch the glass surface. Not recommended unless designed specifically for use on ceramic cooktops.
- **Glass-ceramic** Slow heat conductor. Poor performance, and will scratch the glass surface.
- Stoneware Poor performance, and may scratch the glass surface.

## **OVEN**

### BEFORE USING THE OVEN

Read the instructions for each feature and cooking mode in this manual carefully before using the oven.

## **A** CAUTION

- Do not use any type of foil or oven liner to cover the oven bottom. These
  items can trap heat or melt, resulting in damage to the product and risk
  of shock, smoke or fire. Damage from improper use of these items is not
  covered by the product warranty.
- Foil may be used to catch spills by placing a sheet on a lower rack, several inches below the food. Do not use more foil than necessary and never entirely cover an oven rack with aluminum foil. Keep foil at least 1-1/2" (3.8 cm) from oven walls to prevent poor heat circulation.
- Do not cover the slotted grid of the 2-piece broiler pan with aluminum foil. This will catch the grease and could cause fire.
- Do not use plastic wrap or wax paper in the oven.
- Do not place food, water, ice, or any dish or tray directly on the oven floor, as this will irreversibly damage the enamel surface.
- Do not block, touch or place items around the oven vent during cooking.
   Your oven is vented through ducts at the center above the rear cooktop.
   Do not block the oven vent when cooking to allow for proper air flow.
- The oven and broiler cannot be used during a power outage. If the oven is in use when a power failure occurs, the oven heating element shuts off and cannot be used until power is restored. Once power is restored, you will need to reset the oven (or Broil mode).
- As the oven heats up, the heated air in the oven may cause condensation to appear on the oven door glass. These water drops are harmless and will evaporate as the oven continues to heat up.

#### **Food Poisoning Hazard**

- Do not let food sit in oven more than one hour before or after cooking.
- Foods that can easily spoil such as milk, eggs, fish, meat or poultry, should be chilled in the refrigerator first. Even when chilled, they should not stand in the oven for more than 1 hour before cooking begins, and should be removed promptly when finished cooking. Consuming spoiled food can result in food poisoning or sickness.

### BEFORE USING THE OVEN FOR THE FIRST TIME

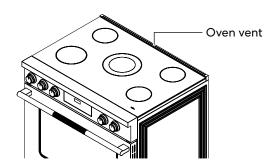

Start the oven in Bake mode at the highest available temperature setting. Allow oven to run for 1 hour to remove any dust or impurities. There will be a distinctive odor - this is normal. Ensure your kitchen is well ventilated during this conditioning period.

#### **OVEN VENT**

Areas near the vent may become hot during operation and may cause burns. Avoid placing plastics near the vent as heat may distort or melt the plastic.

Do not block the vents (air openings) of the range. They provide the air inlet and outlet that are necessary for the range to keep cool and operate properly with correct combustion.

It is normal for steam to be visible when cooking foods with high moisture content.

#### **OVEN DOOR**

Oven heating elements and, if in operation, convection fan will temporarily shut off any time door is opened, and will resume when door is closed within 3 minutes.

#### Note:

 Do not leave the door open any longer than necessary. If the door is left open too long for over 3 minutes, the cooking mode will be automatically cancelled.

#### To avoid oven door glass breakage:

- Do not close the oven door if the racks are not fully inserted into the oven cavity or if bakeware extends past the front edge of an oven rack.
- Do not set objects on the glass surface of the oven door.
- · Do not hit glass surfaces with bakeware or other objects.
- Do not wipe down glass surfaces until the oven has completely cooled.

## **USING OVEN RACKS**

The racks have a turned-up back edge that prevents them from being pulled out of the oven cavity.

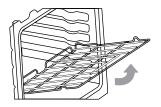

## **A** CAUTION

- Replace oven racks before turning the oven on to prevent burns.
- Do not cover the racks with aluminum foil, or any other material, or
  place anything on the bottom of the oven. Doing so will result in poor
  baking and may damage the oven bottom.
- Only arrange oven racks when the oven is cool.

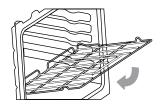

## **Removing Racks**

- 1. Pull the rack straight out until it stops.
- 2. Lift up the front of the rack and pull it out.

## **Replacing Racks**

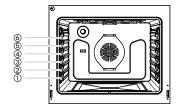

- **1.** Place the end of the rack on the support.
- **2.** Tilt the front end up and push the rack in.

#### **Rack Positions**

For best cooking results, adjust rack so food is placed at the center of the oven. For most foods this will be rack position #3 or #4. For larger foods like roasts and turkey, move the rack position down to #2 or #1 to keep the food centered in the oven.

When using multiple racks simultaneously, try to space the food out around the oven center (rack positions #3 and #5 or #2 and #4 for two racks).

Broiling performs best with the food close to the broil heating element - typically rack position #5 or #6.

### **PREHEATING**

Preheating is generally desirable, although not absolutely necessary in all circumstances.

- For oven modes that utilizes preheat, the control will automatically enter preheat mode and show "PRE" after Start is pressed to turn on the oven.
  - Once the set temperature is reached, an indicator tone will sound for a few seconds to alert the user that preheat is complete.
- Broil and Warm modes do not utilizes preheat, the control will show Hi or Lo for Broil and 175°F (79°C) for Warm after Start is pressed to turn on the oven.

#### Note:

 It is normal for the convection fan to operate during preheating of various baking modes.

Some foods are more robust and may have acceptable results without preheating. These foods include large pieces of meat (whole roasts, hams, or poultry) where the total cooking time is much longer than the time required to preheat. These foods also include frozen potato products and frozen processed dinners that, by their nature and design, are more robust to baking variations. More delicate foods, such breads (including cakes, cookies, pastries, and pizzas), desserts, soufflés, etc. will likely not have acceptable results without proper preheating.

### MINIMUM & MAXIMUM DEFAULT SETTINGS

The various baking modes (Bake, Conv Bake, and Air Fry) have a 10-hour time limit, after which the control will automatically end the baking mode. Broil and Keep Warm modes have a 3-hour time limit. If desired, these modes can be restarted after the time limit expires.

Cooking		Temperatur	re	Maximum Cook Time			
Mode	Minimum	Maximum	Default/Target	(hh:mm)			
Bake	175°F (79°C)	550°F (288°C)	350°F (176°C)	10:00			
Conv Bake	175°F (79°C)	75°F (79°C) 550°F (288°C) 350°F (176°C)					
Air Fry	175°F (79°C)	550°F (288°C)	425°F (218°C)	10:00			
Broil	-	-	Hi: 550°F (288°C) Lo: 400°F (204°C)	03:00			
Keep Warm	-	-	175°F (79°C)	03:00			
Steam Clean	-	-	150°F (66°C)	00:25			

- Once the oven reaches the default or set temperature, the oven pauses heating temporarily. The oven heating cycle will automatically resume to maintain the set temperature.
- Because the oven temperature cycles, an oven thermometer placed in the oven cavity may not show the same set temperature on the oven.

### **BAKE**

The Bake mode uses heat from the lower heating element to cook food. This mode works best with food placed on a single rack. Always preheat the oven first and place food centrally near the middle racks.

# Setting the Bake Mode

For example, to Bake at 375°F.

- 1. Adjust oven rack levels as needed.
- 2. Press Bake once to select Bake mode.
- 3. Press/hold + or to set the bake temperature to 375°F.
- 4. Press Start.
  - --:-- appears in the display, prompting for cooking time to be entered.
- 5. (Optional) Press/hold + or to set the desired cooking time.
- 6. Press Start.

The oven starts to preheat, and PRE appears in the display. Keep the oven door closed, and wait for the oven to preheat to the set temperature.

- If the oven door is opened at the time **Start** is pressed, the oven will turn on when the oven door is closed.
- When the preheat has completed, the set temperature appears in the display and the indicator tone sounds for a few seconds. If a cooking time is set, the countdown will start.
- 7. Place the food in the oven.

#### Note:

- Do not leave the door open any longer than necessary when
  placing food. If the door is left open too long for over 3 minutes, the
  cooking mode will be automatically cancelled.
- Press Cancel/Off when cooking is finished, and remove the food from the oven.

#### Note:

- Baking time and temperature will vary depending on the characteristics, size, and shape of the baking pan used.
- · Check for food doneness at the minimum recipe time.
- Use metal bakeware (with or without a nonstick finish), heatproof glassceramic, ceramic or other bakeware recommended for oven use.
- Dark metal pans or nonstick coatings will cook food faster with more browning. Insulated bakeware will slightly lengthen the cooking time for most foods.

### **CONVECTION BAKE**

The Convection Bake mode uses heat from the lower heating element and air movement from the convection fan to enhance cooking efficiency and evenness across multiple racks. Always preheat the oven first. Baking times may be slightly longer for multiple racks than what would be expected for a single rack.

# Setting the Convection Bake Mode

For example, to Convection Bake at 375°F.

- 1. Adjust oven rack levels as needed.
- 2. Press Bake twice to select Convection Bake mode.

The indicator light above Bake flashes.

3. Press/hold + or - to set the bake temperature to 375°F.

#### 4. Press Start.

--:-- appears in the display, prompting for cooking time to be entered.

**5.** (Optional) Press/hold + or - to set the desired cooking time.

#### 6. Press Start.

The oven starts to preheat, and PRE appears in the display. Keep the oven door closed, and wait for the oven to preheat to the set temperature.

#### Note:

- If the oven door is opened at the time Start is pressed, the oven will turn on when the oven door is closed.
- When the preheat has completed, the set temperature appears in the display and the indicator tone sounds for a few seconds. If a cooking time is set, the countdown will start.
- 7. Place the food in the oven.

- Do not leave the door open any longer than necessary when placing food. If the door is left open too long for over 3 minutes, the cooking mode will be automatically cancelled.
- **8.** Press **Cancel/Off** when cooking is finished, and remove the food from the oven.

#### Note:

- The oven fan runs while convection baking.
- Use Convection Bake for faster and more even multiple-rack cooking of pastries, cookies, muffins, biscuits, and breads of all kinds.
- Place the oven racks in positions suggested in the "Tips and Techniques" section.
- Bake cookies and biscuits on pans with no sides or very low sides to allow heated air to circulate around the food. Food baked on pans with a dark finish will cook faster.

### **AIR FRY**

The Air Fry mode uses heat from the upper and lower heating elements and hot air movement from the convection fan to circulate hot air inside the oven. This mode is specially designed for oil-free frying, and to produce foods with a crispier exterior than traditional oven cooking. The Air Fry mode is intended for single rack cooking only. Always preheat the oven first and place food centrally near the middle racks.

# **Setting the Air Fry Mode**

For example, to Air Fry at 400°F.

- 1. Adjust oven rack levels as needed.
- 2. Press Air Fry to select Air Fry mode.
- **3.** Press/hold + or to set the air fry temperature to **400°F**.
- 4. Press Start.
  - --:-- appears in the display, prompting for cooking time to be entered.
- **5.** (Optional) Press/hold **+** or **-** to set the desired cooking time.

#### 6. Press Start.

The oven starts to preheat, and PRE appears in the display. Keep the oven door closed, and wait for the oven to preheat to the set temperature.

#### Note:

- If the oven door is opened at the time **Start** is pressed, the oven will turn on when the oven door is closed.
- When the preheat has completed, the set temperature appears in the display and the indicator tone sounds for a few seconds. If a cooking time is set, the countdown will start.
- 7. Place the food in the oven.

#### Note:

- Do not leave the door open any longer than necessary when
  placing food. If the door is left open too long for over 3 minutes, the
  cooking mode will be automatically cancelled.
- Press Cancel/Off when cooking is finished, and remove the food from the oven.

### Note:

- · The oven fan runs while air frying.
- Use the air fry tray provided or pans with low sides or no sides for better air flow over foods.

# **BROIL**

The Broil mode uses intense heat from the upper heating element to sear foods. This mode works best for tender cuts of meat, fish, and thinly cut vegetables, and is ideal for toasting, melting cheese, browning and searing surface. Food should be placed near the upper racks, and should not be cooked for too long on each side of the food.

### **Setting the Broil Mode**

- 1. Adjust oven rack levels as needed.
- 2. Press Broil once to select Hi Broil or twice to select Lo Broil.

#### 3. Press Start.

The oven starts to preheat, and HI or LO remains in the display. Keep the oven door closed.

#### Note:

- If the oven door is opened at the time **Start** is pressed, the oven will turn on when the oven door is closed.
- 4. Place the food in the oven after preheating for 5 10 minutes.

#### Note:

- Do not leave the door open any longer than necessary when placing food. If the door is left open too long for over 3 minutes, the cooking mode will be automatically cancelled.
- **5.** Press **Cancel/Off** when cooking is finished, and remove the food from the oven.

- The oven of this range is designed for closed-door broiling. Opening the
  door turns off the broil heating element during broiling. If the door is
  not closed, the Broil mode will ultimately cancel itself.
- The broil heating element is very powerful. Follow recipe directions and monitor food closely to reduce risk of burning food.
- Always use a broiler pan and grid for excess fat and grease drainage.
   This will help to reduce splatter, smoke, and flare-ups. Do not use a broiler pan without a grid. Oil can cause a grease fire.
- Do not cover the grid and broiler pan with aluminum foil. Doing so will
  cause a fire.

#### **KEEP WARM**

The Keep Warm mode uses heat from the lower heating element to maintain oven temperature at around 175°F (79°C). It will keep cooked food warm for serving up to 3 hours after cooking has finished. Cover foods that need to remain moist and do not cover foods that should be crisp. Preheating is not required.

# Setting the Keep Warm Mode

- 1. Adjust oven rack levels as needed.
- 2. Place the hot food in the oven.
- 3. Press Keep Warm to select Keep Warm mode.
- 4. Press Start.

The oven starts to preheat, and 175F (79°C) remains in the display. Keep the oven door closed.

#### Note:

- If the oven door is opened when Start is pressed, the oven will turn
  on when the oven door is closed.
- **5.** Press **Cancel/Off** when warming is finished, and remove the food from the oven.

- Do not use to Warm mode to heat cold food. Always start with hot food.
- It is recommended that food not be kept warm for more than 2 hours.
- The warm mode is intended to keep food warm. Do not use it to cool food down.
- Avoid opening the oven door more than necessary during use. If the door is left open too long for over 3 minutes, the cooking mode will be automatically cancelled.

### **TIPS AND TECHNIQUES**

#### **Bake**

Baking is cooking with heated air. The lower element in the oven is used to heat the air but no fan is used to circulate the heat.

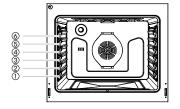

Follow the recipe or convenience food directions for baking temperature, time and rack position. Baking time will vary with the temperature of ingredients and the size, shape and finish of the baking utensil.

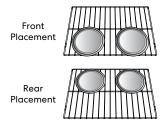

- For best results, bake food on a single rack with at least 1" 1½" (2.5 3 cm) space between utensils and oven walls.
- Use one rack when selecting the bake mode.
- · Check for doneness at the minimum time.
- Use metal bakeware (with or without a non-stick finish), heatproof glass, glass-ceramic, pottery or other utensils suitable for the oven.
- When using heatproof glass, reduce temperature by 25°F (15°C) from recommended temperature.
- Use baking sheets with or without sides or jelly roll pans.
- Dark metal pans or nonstick coatings will cook faster with more browning.
   Insulated bakeware will slightly lengthen the cooking time for most foods.
- Do not use aluminum foil or disposable aluminum trays to line any part of the oven. Foil is an excellent heat insulator and heat will be trapped beneath it. This will alter the cooking performance and can damage the finish of the oven.
- Avoid using the opened door as a shelf to place pans.
- See Troubleshooting for tips on solving Oven Problems.

### **Convection Bake**

Convection Bake uses heat from the lower heating element and air movement from the convection fan to enhance cooking efficiency and evenness across multiple racks. Reduce recipe baking temperatures by 25°F (15°C).

- For best results, foods should be cooked uncovered, in low-sided pans to take advantage of the forced air circulation. Use shiny aluminum pans for best results unless otherwise specified.
- Heatproof glass or ceramic can be used. Reduce temperature by another 25°F (15°C) when using heatproof glass dishes for a total reduction of 50°F (30°C).
- Dark metal pans may be used. Note that food may brown faster when using dark metal bake ware.
- The number of racks used is determined by the height of the food to be cooked.
- Baked items, for the most part, cook extremely well in convection. Don't
  try to convert recipes such as custards, quiches, pumpkin pie, or
  cheesecakes, which do not benefit from the convection-heating process.
  Use the regular Bake mode for these foods.
- Multiple rack cooking for oven meals is done on rack positions 1, 2, 3, 4, 5, and 6. All six racks can be used for cookies, biscuits and appetizers.
  - 2 Rack baking: Use positions 3 and 5 or 2 and 4.
  - 3 rack baking: Use positions 2, 3, and 4 or 1, 3, and 5 or 2, 4, and 6.
  - When baking four cake layers at the same time, stagger pans so that one pan is not directly above another. For best results, place cakes on front of upper rack and back of lower rack (See graphic at right). Allow 1" - 1½" (2.5 - 3cm) air space around pans.

- Converting your own recipe can be easy. Choose a recipe that will work well in convection.
- Reduce the temperature and cooking time if necessary. It may take some trial and error to achieve a perfect result. Keep track of your technique for the next time you want to prepare the recipe using convection.
- See Troubleshooting for tips to Solving Baking and Roasting Problems.

Foods recommended for convection bake mode:

Appetizers, Biscuits, Cakes, Casseroles, Coffee Beans, Cookies (2 to 4 racks), Cream Puffs, Popovers, Yeast Breads, One-Dish Entrées, Oven Meals (rack positions 3 and 4), and Air Leavened Foods (Soufflés, Meringue, Meringue-Topped Desserts, Angel Food Cakes, Chiffon Cakes).

### Air Fry

The Air Fry mode uses heat from the upper and lower heating elements and air movement from the fans to circulate hot air inside the oven and to produce foods with a crispier exterior than traditional oven cooking.

- For best results, use the provided air fry tray and position oven rack so that food is placed centrally near the middle racks.
- If you don't have the air fry tray, place food on a wire rack inside a foillined broiler pan or on a dark baking pan with low sides or no sides for better air flow over foods.
- Spread the food out evenly in a single layer. Check food often and shake it or turn it over for crisper results.
- If desired, spray the baking tray or air fry tray with a pan spray. Use an oil
  that can be heated to a high temperature before smoking, such as
  avocado, grapeseed, peanut or sunflower oil.
- Place a foil-lined baking tray on the bottom rack to catch the oil falling from the food. For high fat foods like chicken wings, add a few sheets of parchment paper to absorb the fat.
- Foods high in fat will smoke when using the Air Fry mode. Turn on your exhaust hood at a high fan setting or open a window to make sure the kitchen is well-ventilated.
- Prepared frozen foods may cook faster with the Air Fry mode than stated on the package. Reduce the cooking time by about 20 percent, check food early, and adjust cooking time as needed.

#### **Broil**

The Broil mode uses intense heat from the upper heating element to sear foods. The size, weight, thickness, starting temperature, and your preference of doneness will affect broiling times.

- For best results when broiling, use a pan designed for broiling.
- Preheat the oven for about 5 minutes before placing food in the oven.

# RANGE CARE AND MAINTENANCE

# MANUAL CLEANING

**IMPORTANT:** Before cleaning, make sure all controls are off and the oven and cooktop are cool. Always follow label instructions on cleaning products. Soap, water and a soft cloth or sponge are suggested first unless otherwise noted. Do not use abrasive cleaning products.

#### Note:

- Do not clean the oven door gasket. The material of the gasket cannot withstand abrasion. It is essential for the gasket to remain intact. If you notice it becoming worn or frayed, replace it.
- Re-engage the anti-tip bracket if range is moved.

### **GLASS-CERAMIC COOKTOP**

- Before using the cooktop for the first time, clean it with a ceramic cooktop cleaner. This helps protect the top and makes cleanup easier.
- Regular use of ceramic cooktop cleaner will help keep the cooktop looking new.
- If any sugar or food containing sugar spills, or plastic or foil melts on the
  cooktop, remove the material IMMEDIATELY with a metal razor scraper
  while the cooking surface is still hot to avoid the risk of damage to the
  glass-ceramic surface. When used correctly, the scraper will not damage
  the cooktop surface.
- For your safety, please use an oven mitt or pot holder while scraping the hot cooking surface.
- If water or food containing water spills, remove the spill IMMEDIATELY with a dry paper towel.
- Do not use scrub pads or abrasive cleaning pads. They may damage your cooktop surface.

### **Cleaning Method:**

- Use ceramic cooktop cleaner on the glass cooktop. Other creams may not be as effective or may scratch, damage or stain the cooktop surface.
- Use a paper towel or non-scratch cleaning pad to clean the entire cooktop surface.
- Rinse with clear water and use a dry cloth or paper towel to remove all cleaning residue.

#### Note:

- Any damage or failure of the product resulting from the items below may not be covered under the Limited Warranty.
  - Sugary spillovers (such as preserves, ketchup, tomato sauce, jellies, fudge, candy, syrups, or chocolate) or melted plastics can cause pitting on the surface of your cooktop.
  - If food or water containing calcium (such as baking powder, wine, milk, spinach, or broccoli) is spilled on the cooktop, it can permanently stain or discolor the surface.

# **BURNED-ON RESIDUE**

- Allow the cooktop to cool.
- For additional protection, after all residue has been removed, polish the entire surface with ceramic cooktop cleaner and a paper towel.

# **Cleaning Methods:**

- Spread a few drops of ceramic cooktop cleaner on the entire burned residue area. Using a non-scratch cleaning pad for ceramic cooktops, rub the residue area, applying pressure as needed. Leave the cleaner on for 10 minutes before rinsing it off.
- Rinse with clear water and wipe the cooktop surface with a clean, dry paper towel. If any residue remains, repeat the steps listed above as needed.

#### Note:

 Damage to your glass surface may occur if you use scrub pads other than those recommended.

### **HEAVY BURNED-ON RESIDUE**

- · Allow the cooktop to cool.
- For additional protection, after all residue has been removed, polish the entire surface with ceramic cooktop cleaner and a paper towel.

## **Cleaning Methods:**

- While the cooktop is still warm, use a single-edge razor blade scraper at approximately a 30° to 45° angle against the glass surface and scrape the soil. It will be necessary to apply pressure to the razor scraper in order to remove the residue.
- When the cooking surface is completely cooled, spread a few drops of ceramic cooktop cleaner on the entire burned residue area. Using a nonscratch cleaning pad for ceramic cooktops, rub the residue area, applying pressure as needed. Leave the cleaner on for 10 minutes before rinsing it off.
- Rinse with clear water and wipe the cooktop surface with a clean, dry paper towel.

#### Note:

Do not use a dull or nicked blade.

# **METAL MARKS AND SCRATCHES**

- Cookware with rough or uneven bottoms can mark or scratch the cooktop surface. Carefully check the bottom of pans.
- Do not slide metal or glass across the cooktop surface.
- Do not use cookware with any dirt build-up on the bottom.
- Always clean the cooktop surface before cooking.
- Be careful not to place aluminum baking sheets or aluminum frozen entrée containers on a hot cooktop surface. It will leave shinny dots or markings on the cooktop surface. These markings are permanent and cannot be cleaned off.

### Cleaning Methods:

- Be careful not to slide pots and pans across your cooktop. It will leave
  metal markings on the cooktop surface. These marks are removable using
  the ceramic cooktop cleaner with a non-scratch cleaning pad for ceramic
  cooktops.
- If pots with a thin overlay of aluminum or copper are allowed to boil dry, the overlay may leave black discoloration on the cooktop. This should be removed immediately before heating again or the discoloration may be permanent.

# **EXTERIOR STAINLESS STEEL**

· Rub in direction of grain to avoid damaging.

### **Cleaning Methods:**

- Liquid detergent or all-purpose cleaner: Rinse well with clean water and dry with soft, lint-free cloth.
- Stainless Steel Cleaner and Polish. Vinegar for hard water spots.

#### Note:

 Do not use soap-filled scouring pads, abrasive cleaners, cooktop polishing cream, steel-wool pads, gritty washcloths or some paper towels. Damage may occur, even with one-time or limited use.

# **COOKTOP CONTROL KNOBS**

- Pull knobs straight away from control panel to remove.
- When replacing knobs, make sure knobs are in the OFF position.

# Cleaning Method:

· Wash with soap and water.

#### Note:

 Do not use steel wool, abrasive cleansers or oven cleaner. Do not soak knobs.

### CONTROL PANEL

- It's a good idea to wipe the control panel after each use.
- Disconnect power to the unit before cleaning if needed.

## **Cleaning Method:**

- Glass cleaner and soft cloth or sponge: Apply glass cleaner to soft cloth or sponge, not directly on panel.
- · Clean up splatters with a damp cloth.

#### Note:

 Do not use abrasive cleaners, steel-wool pads, gritty washcloths or some paper towels. Damage may occur.

### **OVEN DOOR**

- · Do not immerse the door in water.
- · Do not spray water or glass cleaner on the door vents.
- Do not use oven cleaners, cleaning powders, or harsh abrasive cleaning materials on the outside of the oven door.
- · Do not clean the oven door gasket.

# **Cleaning Method:**

Glass cleaner and paper towels or nonabrasive plastic scrubbing pad:
 Apply glass cleaner to soft cloth or sponge, not directly on panel.

# **OVEN RACKS**

• All racks can be washed with warm, soapy water.

# **Cleaning Method:**

- Clean with warm, soapy water, and use steel-wool pad if necessary.
- · Rinse with clean water and dry.

### **OVEN CAVITY**

 Food spills should be cleaned when oven cools. At high temperatures, foods react with porcelain, so staining, etching, pitting or faint white spots can result.

### **Cleaning Method:**

· Mild detergent and warm water.

#### Note:

- Do not use oven cleaners.
- To better reach and clean the oven cavity, detach the oven door from the range. See "Removing/Assembling Oven Door" section in the Installation Instructions manual.

# STORAGE DRAWER

• Fully open the drawer and empty the drawer before cleaning.

# **Cleaning Method:**

· Clean with warm water, and use a damp cloth or sponge.

- Do not use scrub pads or abrasive cleaning pads.
- Most cleaning can be done with the drawer in place; however, the drawer may be removed if further cleaning is needed. See "Removing/Assembling Storage Drawer" section in the Installation Instructions manual.

# STEAM CLEAN

The Steam Clean feature is designed to use water and a low oven temperature to generate steam to warm the oven interior surfaces and loosen light soils before hand-cleaning.

#### **Burn Hazard**

- Do not leave small children unattended near the appliance during the cleaning cycle. The outside of the range can become hot to the touch.
- During the cleaning cycle, the oven becomes hot enough to cause burns. Wait until the cycle is over before wiping the inside surface of the oven. Failure to do so may result in burns.
- Oven surfaces may be hot after the cleaning cycle. Use caution and wear rubber gloves while cleaning to prevent burns.
- Hot surfaces may create hot steam in wet sponge or cloth while cleaning. If steam is evident when wiping out oven, wait until oven has cooled slightly.

# **BEFORE STARTING STEAM CLEAN**

- Allow the oven to cool to room temperature before starting. If your oven cavity is above 150°F (65°C), HOT will appear in the display when you attempt to select Steam Clean mode.
- · Remove all items from the oven, including oven racks.
- Wipe any heavy spillovers or excess debris. Scrape off and remove any burnt-on debris with a plastic scraper. (Suggested plastic scrapers includes hard plastic spatula, plastic pan scraper, plastic paint scraper, and old credit card.)
- The range should be level to ensure that the bottom surface of the oven cavity is entirely covered by water at the beginning of Steam Clean.
- For best results, use distilled or filtered water. Tap water may leave mineral deposits on the surfaces.
- For improved softening of tough stains, spray inside surfaces with water spray bottle or wipe surfaces with a wet sponge before starting.

# **SETTING STEAM CLEAN**

Start with oven at room temperature.

- 1. Remove oven racks and accessories from the oven.
- 2. Scrape off and remove any burnt-on debris with a plastic scraper.
- **3.** Pour 10 oz or 300 ml of water onto the bottom center of the oven cavity. The indentation on the oven bottom should be fully covered to submerge all soils.

#### Note:

- For improved softening of tough stains on the walls and in the corners of the oven, wipe inside surfaces with a wet sponge.
- 4. Close the oven door.
- **5.** Press and hold **Broil** and **Cook Time** at the same time to select Steam Clean mode.

### Note:

- If your oven cavity is above 150°F (65°C), HOT will appear in the display and prevent Steam Clean mode to be selected.
- 6. Press Start.

The Steam Clean cycle will run for 25 minutes by default. Keep the oven door closed.

- If the oven door is opened at the time **Start** is pressed, the oven will turn on when the oven door is closed.
- Press Cancel/Off to cancel Steam Clean at any time.

7. After the Steam Clean cycle, soak up any remaining water and clean the oven cavity immediately by scrubbing with a soft, damp, non-abrasive sponge or cloth. Place a towel on the floor in front of the oven to capture any water that may spill out during hand-cleaning.

- Place a towel on the floor in front of the oven to capture any water that may spill out during hand-cleaning.
- **8.** If some light soils remain, repeat the above steps, making sure to thoroughly soak the soiled areas. Once the oven cavity is cleaned, wipe any excess water with a clean dry towel.
- **9.** Replace racks and any other accessories.

# **BEFORE CALLING FOR SERVICE**

First try the solutions suggested here to possibly avoid the cost of a service call.

# **COOKTOP PROBLEMS**

Problem	Possible Cause	Solution
Surface units do not turn on	There is no power to the range.	Make sure electrical plug is plugged into a live, properly grounded outlet. Replace the fuse or reset the circuit breaker.
	Cooktop controls improperly set.	Check to see the correct control is set for the surface unit you are using.
Excessive heat around cookware on cooktop	The cookware is not the proper size for the element or burner.	Use cookware with a bottom surface approximately the same size as the cooking area, element, or surface burner. Cookware should not extend more than 1" (2.5 cm) outside the cooking area. Adjust the power level or burner flame appropriately.
Frequent cycling on and off of surface units	The element cycle on and off to maintain the heat setting.	This is normal even when the element is on the highest setting.
Surface unit stops glowing when changed to a lower setting	The unit is still on and hot.	This is normal.

Problem	Possible Cause	Solution							
Cooking results are not what	Using incorrect cookware.	See "Using the Proper Cookware" in the "Operation" section.							
expected	The control knob is not set to the proper heat level.	See "Using the Cooktop Elements" in the "Operation" section.							
Unable to maintain a rolling boil or will not cook fast enough	Using improper cookware.	Use pans with flat bottoms and that match the diameter of the cooktop element selected. See "Using the Proper Cookware" in the "Operation" section.							
	Using large cookware without lid.	Large pots and pans can lose a lot of heat from the top. Cover pot or pan with a lid to retain heat better.							
Areas of discoloration on the cooktop	Food spillovers not cleaned before next use.	See "Cleaning" in the "Range Care and Maintenance" section.							
	Cooktop is not cleaned thoroughly.	See "Cleaning" in the "Range Care and Maintenance" section.							
	Mineral deposits from water and food.	Remove using a glass-ceramic cooktop cleaning crème. Use cookware with clean, dry bottoms.							
Scratches or abrasions on cooktop surface	Coarse particles such as salt or sand between cooktop and utensils can cause scratches.	Be sure the cooktop surface and bottoms of utensils are clean before using. Small scratches do not affect cooking and will become less visible with time.							
	Cookware with rough bottom has been used.	Use smooth, flat-bottomed cookware.							
	Cleaning materials not recommended for glass-ceramic cooktop have been used.	See "Cleaning" in the "Range Care and Maintenance" section.							

Problem	Possible Cause	Solution
Metal marks	Scraping of metal utensils on cooktop surface.	Do not slide metal utensils on cooktop surface. Use a glass-ceramic cooktop cleaning crème to remove the marks. See "Cleaning" in the "Range Care and Maintenance" section.
Brown streaks or specks	Boilovers are cooked onto surface.	Use a blade scraper to remove soil. See "Cleaning" in the "Range Care and Maintenance" section.

# **OVEN PROBLEMS**

Problem	Possible Cause	Solution						
Strong odor when using new oven	Manufacturing protective coating on the oven surfaces.	This is normal with a new range and will disappear after a few uses.						
	Packaging materials exist.	Double-check that all packaging has been removed from the appliance - check around door sides and inside drawer.						
Oven is not heating	No power to the range.	Check the circuit breaker or fuse boot to your house. Make sure there is proper electrical power to the oven.						
	Oven control not turned on.	Make sure the oven temperature has been selected.						
Oven is taking too long to cook	All ovens operate slightly differently from each other.	Adjust oven calibration upwards to make oven cook faster. See "Oven Settings" in the "Operation" section.						
Food is overcooked	All ovens operate slightly differently from each other.	Adjust oven calibration downwards to reduce overcooking. See "Oven Settings" in the "Operation" section.						

Problem	Possible Cause	Solution						
Oven is not cooking evenly	Not using the correct bakeware or oven rack position.	Refer to "Using Oven Racks" in the "Operation" section and the recommended rack position for the cooking modes. Always reduce recipe temperature by 25°F (15°C) when baking with Convention Bake mode.						
		Recipe may perform better at a different rack position. Try moving the food down a rack position to make the bottom darker. Try moving food up a rack position to make the top darker.						
Cooling fan continues to run after oven is turned off	The electronic components have not yet cooled sufficiently.	The fan will turn off automatically when the electronic components have cooled sufficiently.						
Oven display stays Off	Power interruption.	Turn off power at the main power supply (fuse or breaker box). Turn breaker back on. If condition persists, call for service.						
Oven display is on but will not respond	System error.	Resetting the power at the breaker box can usually reset the oven control and clear response issues.						
Oven light is not working properly	Light bulb loose or burned-out.	Reinsert or replace the light bulb. Touching the bulb with fingers may cause the bulb to burn out.						
Oven light stays on	Door is not closing completely	Check for obstruction in oven door. Check to see if hinge is bent or door switch broken.						
Cannot remove lens cover	Soil build-up around the lens cover.	Wipe lens cover area with a clean, dry towel prior to attempting to remove the lens cover.						
Clock and timer are not working properly	No power to the range.	Check the circuit breaker or fuse box to your house. Make sure there is proper electrical power to the oven.						

Problem	Possible Cause	Solution
Excessive Moisture on door glass	Condensation from cooking foods with high moisture content.	This is normal. Condensation will evaporate as oven heats up. Convection Bake and Convection Roast will eliminate any moisture in the oven.
Porcelain Chips	Porcelain interior is chipped by oven racks	When removing and replacing oven racks, always tilt racks upward and do not force them to avoid chipping the porcelain.
"E" and a number appears in display	System error detected.	This is an error code. Press  Cancel/Off to clear the display and stop the beeping. If necessary, reset oven power at the circuit breaker. If error code remains or repeats, write down error code and contact a qualified service provider for repairs.

# **DRAWER PROBLEMS**

Problem	Possible Cause	Solution
Drawer does not slide	The drawer is out of alignment	Fully extend the drawer and push it all the way back in.
smoothly or drags	The drawer is overloaded or the load is unbalanced	Reduce load weight. Redistribute drawer loads.

# **ERROR CODES**

Error Code	Description
F1E1	System communication failure.
F3E1	Oven cavity sensor circuit error (open/short).
F3E2	Problem with the oven temperature sensor receptacle on PCB.
F3E3	Oven is not heating after a cooking mode has started for 15 minutes.
F6E5	Oven temperature has exceeded 649°F (343°C) preset maximum threshold.
